COURSE-IN-A-BOX · INSTRUCTOR LICENSE

Teach Machine Learning Foundations

A ready-to-deliver course that turns learners who use Python and pandas into practitioners who build supervised models they can defend: pipelines, honest evaluation, features, linear models, classic classifiers, trees and boosting, selection and tuning, on one company's data, ending in a final project.

`11 sessions × 3 h = 33 h` `21 lessons` `132 self-check items` `362 slides` `45 lab pairs`

WHO IT'S FOR

Learners: analysts, developers and data-science graduates who know Python and pandas (the course follows *Python Data Science*); no machine-learning or statistics background needed. **Programs:** trainers, bootcamps, colleges, corporate L&D and workforce programs; weekly, twice weekly or intensive.

WHAT LEARNERS CAN DO AFTER IT

- Split data the way a model will be used, catch leakage, beat a do-nothing baseline
- Keep every learned step inside a cross-validated pipeline
- Set thresholds from business costs; compare and tune linear models, k-NN, Naive Bayes, SVMs, trees, forests and boosting fairly
- Deliver a churn, demand or fraud project with an honest one-page report

WHAT YOU GET

FOR EVERY SESSION (×11)

- **Facilitator guide:** 0:00–3:00 agenda, scripted demos with real output, mistakes to expect, what to cut
- **Workbook** with a 12-item self-check; **answer key**; **slide deck**; new **labs**

ACROSS THE KIT

- Combined print-ready books; 45 lab pairs + 14 find-the-bug handouts, checked by one offline command
- Environment check, diagnostic, **Checkpoint 1**, a **final project** with rubric and reference answers, setup guide, public syllabus

WHY INSTRUCTORS CHOOSE IT

- **One fictional dataset:** Pinecrest Outfitters' churn, demand, 50,000 payments with rare fraud, reviews; planted leaks; no privacy risk
- **Honest pacing:** demo, guided lab and project start in the room; the rest at home
- **Every number is real:** all code and outputs were run (scikit-learn 1.9)
- **Free tools, no GPU:** Python 3.12+, JupyterLab or VS Code; no accounts or downloads in class

THE NEXT STEP, LICENSE & PRICING

Advanced Machine Learning (13 sessions, 39 h: SHAP and fairness, clustering, dimensionality reduction, PyTorch, text, recommendations, MLOps, a capstone) starts where this kit ends. Each kit is licensed on its own.

Solo [$997] one-time: one instructor, unlimited students · **Organization** [$2,997] one-time: unlimited instructors at one organization · **White-label** [$5,997] one-time: your branding, edit and adapt · optional updates [$199/yr].

Suggested anchors, set at point of sale. Dataset included; terms in `LICENSE.md`. Ask for a sample session: rays-home.netlify.app/contact.
